To:

Dear HR/Employer,

Greetings!

I'm writing to express my interest in the position of, and I am reaching out to express my keen in your company.

Since I have an eye for details and a natural predisposition toward organization. I'm excited about the chance to fulfill your objectives.

Regarding the prerequisites and job description that were published:

It sounds great. The education, certificates, and GitHub page show I am fit for this position as well as active in your work scope. I have worked on, however, I do not have worked on.....but I think when my position is specified by you, I will have to learn about them more. I am really passionate about Web 3.0. Based on the CV qualifications, I am sure to pick up with every kind of new stack/customized solutions.

For any kind of information, you can do search with jargon, programming language, or stack names on my personal website to find delivered/related works. I also have some evidences about a part of your work that you can see under the section of achievements on my personal website (I can offer further details to obtain verification).

I am particularly interested in your company as a form of office or remote working. Without a doubt, my current major and future job are related to blockchain and cutting-edge technologies. I take a scientific approach to all my decisions, considering practical or hands-on skills.

Current status

I have selected a personal brand called 21Crickets for tracking activities like learning, mentoring, R&D, personal/practical skills development, attending training courses, or other relevant endeavors.

About three years and a half I have been making concentration on these parallel activities:

- I used to **trade** as a technical and fundamental analyst of cryptocurrency and DeFi for one year. I have reports of my prior activities.
- I'd brush up on my **English** before going to foreign country.
- I finalized a **master's dissertation**. It required a lot of effort to convince several professors as referees and finally I was able to get the result by applying the corrections in some review steps.
- Learning **Rust programming**. To gather and categorize all information and samples with more than five books and internet resources into one md-book to personal usage. A part of those exists on my **Github** as samples of pure Rust and Web development in different business logic like blockchain.
- Mentoring Rust on Faradars platform. It is the first educational package to teach Rust in Persian language.
- Created a portfolio and website to map up and make relationships between all my experiences during the ten years past.
- As a guidance counselor for some native companies and trading platforms with over 10 million users.
- Three years of **R&D** experience in the fields of blockchain, DeFi, and ReFi by taking out some certificates.
- Author an **MVP** called MFS NFT music platform (21crickets.github.io).
- Developed a simple MVP based on the substrate framework (MobarakehSteel , mstid.com).

After all these, I am looking forward to an opportunity to utilize my skills, obviously!

I fit this post perfectly. If you have any questions, required documents, or want to discuss this further, please call or email me at your convenient time.

Thank you for your time and consideration.

Sincerely,

Arman Riazi
