RE:

Dear Hiring Manager,

I am applying for the position to express my interest because your mission and vision align with my values. As you'll see from my resume, what motivates me is working for organizations, like yours, that serve a higher purpose. I would love to bring my skills and experience to support your cause.

Upon reviewing your job ad, I believe that my skills in programming, and distributed or decentralized systems fit well for this position. My education, certificates, and GitHub page demonstrate my suitability for this position and my active involvement in your work domain. My time at 21Crickets as a personal brand/start-up allowed me to hone my abilities and take on more challenging opportunities, in addition tracking various activities such as learning, mentoring, research and skill development, attending training courses, and other relevant pursuits. For approximately three and a half years, I have focused on these concurrent endeavors.

I plan to take what I have learned and apply it to this position with the dedication to constantly improve and exceed expectations. I am highly passionate about your technology and based on my qualifications I can learn new technologies and stacks quickly. You can find more information and examples of my work on my website. I am interested in both onsite and remote work, and my current situation and future jobs will be focused on cutting-edge technologies. I make decisions based on a scientific approach and consider practical skills. There are elaborated further details to assert the verification. I am particularly interested in onsite work for the company and also remote work.

You may notice a gap in my employment while reviewing my resume. From 22/06/2013 to 3/21/2015, during this period, I had to go to compulsory military service. The time that I was able to commit to my education has been invaluable to my professional growth as far as I have passed the three times entrance examinations to the universities so far. From 2020 to 2024 some major reasons changed my condition:

- Covid-19 from 2020 to 2021;
- Defending the master's thesis and making corrections of referees.
- In the zenith of unemployment and working under inappropriate economic conditions;
- The advent of new languages and stacks, and mature technologies like blockchain that needed a period of self-learning again;
- Managed a cryptocurrency portfolio as a technical and fundamental analyst in decentralized finance for almost two years and I withdrew it in 2021 (At least, I learned how to manage stress while keeping stamina; Having R&D and real use-case in DeFi).

I had to keep self-studying because of my love for the major. At the time, I thought I would be keeping self-study learning to update my prior experiences.
I have been working at Partdp.ai, which is a good company for professionals. I have pursued the manager of the company to adjust a contract per month because of my deterministic plan to immigrate. I must notify them one month before my left work.
I am eager to re-enter the professional sphere and apply my newfound qualifications and knowledge to the job.
Please take a look at my enclosed resume for more details about my work experience and qualifications. I fit this post perfectly. If you have any questions, evidence, or want to discuss this role further, please keep in touch with me via the mentioned email. I'd really like to speak with you more about the position, and I look forward to hearing from you soon.

Thank you for your time and consideration.

I don't believe in contributing to various open-source projects because nobody diligent to work without compensation, just like you and me. So, I'd prefer to pin sample or pilot projects on the GitHub that written fully by me.

PUBLICATIONS

- Using ACO Algorithm to Improve Performance for Container-based Scientific.
- Towards Blanket Licensing Digitized Music NFT Decentralized.
- Understanding the Landscape of Regenerating Finance and Digital Transformation.
- Digital Transformation in Smart Cities: Decentralized Architecture for Sustainable Development within the Web 3.0 Ecosystem.
- Supplement to Rust Programming: Advanced Concepts and Techniques (Multimedia in addition wrote a book as an author to native language).
- Ultimate Rust Systems Programming Architecting (Book technical editor to English).

DOCUMENTATION

- API-Gateway is hub of requests and responses that written no-vendor lock in. One part is APIs of clients or front-end application to connect the gateway and the other part is services of AI in which they communicate with each other (deployed on the GitHub).
- Supplement to Rust Programming: Advanced Concepts and Techniques is an online book the deployed on the GitHub privately.
- TypeScript Programming Essentials: A Supplementary Guide is an online book that deployed on the GitHub.
- Instructions and commands of infrastructure such as Docker, Ubuntu, CLIs, etc., which are private documents.

Sincerely,
Arman Riazi
