ARMAN **RIAZI**

SUMMARY

Senior-level Software and Decentralized Application Developer passionate about creating cutting-edge products. Adept at working with teams or independently.
A potential co-worker is looking for an opportunity in backend development to advance bilaterally. Motivated professional speaking with evidence and looking forward to an opportunity to utilize skills based on a scientific approach.
Driven to develop complex and innovative solutions to meet customer business requirements. Passionate developer set to work on-site or remotely, and hope to work with you.

Bold Profile

EXPERIENCE

Senior Backend Developer
***Partdp**.ai (ref to the cover letter) | March 2024 - Current*

- Developed Microservices using Express.js, ORMs, Message-broker, Nest.js, TypeScript, Node.js and PostgreSQL.
- Created RESTful API services to communicate with front-end applications and AI services.
- Researched and implemented new technologies to improve backend code functionality.

Blockchain Developer
***21Crickets** Self-Employed | November 2020 - February 2024*

- Collaborated with OrangeAVA as a technical editor to publish the Ultimate Rust for System Programming book.
- Partnered with Faradars platform as a mentor to teaching Monorepo, and Rust programming.
- Recommended strategies to implement a pilot project called the MFS NFT music platform based on Unique Network.
- Recommended strategies to implement a pilot project called the Mobarakeh Steel Blockchain based on the Substrate framework.
- Assisted cryptocurrency platforms with over ten million users.
- Researched emerging technologies related to blockchain development.
- Wrote articles in the fields of blockchain, cloud computing, and ReFi.
- Developed and maintained back-end applications using Express.js, Node.js, IBM Cloud, CouchDB, Restful API, and PostgreSQL.
- Documented the online books of Typescript-all-in-one and Rust-all-in-one.
- Implemented Substrate smart contracts and pallets as a sample project.
- Conducted three years of extensive Web 3.0, exploring innovative solutions, and staying ahead of emerging trends.
- Performed structured design reviews, programmed systems, wrote unit tests, and reviewed system test results.

Deployment Consultant
***Pardazesh Kamyab** Tikro | September 2020 - October 2020*

- Achieve a 5% cost reduction in system management by adding features such as fault-tolerance and high-availability.
- Made a DevOps solution for developers based on CI Azure.

Senior Full Stack Developer
***Yalda Industry** Zarifmosavar | June 2020 - August 2020*

- Made a platform, B2B market increased by 9% customer acquisition.
- Conducted developing a sample of microservices using Molecular framework.
- Created a custom dotNetCore ecommerce and modified existing themes to meet the customer's needs.

Freelance Web Developer
***Self-Employed** | August 2019 - May 2020*

- Collaborated with SOS to enhance code functionality of an CRM.
- Collaborated with SafaRayaneh company to enhance code functionality of an CMS.
- Designed websites, portals and large-scale web applications for multiple clients.
- Integrated payment and SMS third-party APIs into web applications for enhanced functionality.

SKILLS

- **Programming Languages:** Rust, TypeScript, C#, Node.js, Java
- JavaScript Libraries and **Frameworks:** Nest.js, Express.js, Angular
- **Blockchain** Frameworks: Substrate, Solana, Polkadot
- **Databases** Skills: Postgresql, Apache CouchDB, Sql Server
- **Version Control** Systems: Git, GitLab
- Research and Development
- Software Best Practices
- Software Development Lifecycle
- Agile Software Development
- Web Architecture
- Application Development
- Domain-Driven Design
- Object-Oriented Programming
- Functional Programming
- API Development
- Monorepo
- GraphQL
- Test-Driven Development
- Blockchain Development
- Smart Contract
- NFT
- DeFi
- ReFi
- Web and Application Servers
- Cloud Computing
- CloudSIM
- Docker
- Virtualization
- Continuous Integration
- Rancher
- OpenTelemetry
- Ubuntu
- Windows Server
- Content Creation Tools
- Results-Oriented
- Problem-Solving
- Requirements Analysis
- Technical Analysis
- Performance Optimization
- Analytical Thinking
- Adaptability

Senior Full Stack Developer
Nikafarinegan | *April 2018 - July 2019*

- Achieve a 20% cost reduction in system management by adding features such as fault-tolerance and high-availability.
- Created a platform for applicants for an enterprise-wide organization in the field of electric trade with over 10k employees.
- Managed multiple web projects simultaneously, using dotNetCore, Razor, GraphQL, SSR, IIS, MVC, DDD and Angular.
- Deployed web applications from local development environments to production servers using technologies like Kubernetes, Rancher, and Docker.
- Created RESTful APIs to enable communication between the frontend and backend of applications.
- Assisted other developers with coding, troubleshooting and debugging.

Freelance Web Developer
Self-Employed | *February 2017 - March 2018*

- Integrated third-party Raja Rail Transport company APIs into a web application for enhanced functionality.
- Directed design, writing and production of page content to fulfill project demands and satisfy customer needs.
- Developed, web applications using HTML5, CSS3 and JavaScript, JQuery, Entity Framework, Kendo UI, and Crystal Report.

Developer Consultant
Foroud Travel | *November 2017 - December 2017*

- Modified customer service support system to reduce complaints by 9%.
- Developed web applications using Angular, and MVC web application.

Junior Software Engineer
Daewoo International Industry | *December 2015 - February 2017*

- Maintained a Sales software to reduce provision processing time by 13%.
- Provided sustainability of the line of producing products by 100% during peak promotion days or requests of credit shopping while ensuring the continuation and enhancement of services.
- Analyzed solutions, fix software code and Store-procedures bugs.
- Developed and maintained software applications using .Net Framework.
- Participated in agile development of products within cross-functional frameworks.

QUALIFICATIONS

- Obtaining an IELTS band score of six.
- Scratch Blockchain | Awesome-Rust (Rust).
- JS-Family (Unique NFT, NodeJS, TypeScript, ExpressJS, and NestJS).
- ACO Workflow Function Container Framework based on CloudSIM (Java).
- Applicant Portal (NetCore, GraphQL, RestApi, and Angular).
- API-Gateway (Express.js, Sequelize, OpenTelemetry).

ACTIVITIES

- Excess of what had been carried out in the companies privately, some projects are shown as open source or **self-developed on GitHub** that are part of noticeable and accessible projects.
- **Experiences prior to 2015** have been eliminated, thus resulting in the most up-to-date records spanning a period of ten years.
- Please be aware if the mentioned elements are deemed unsuitable for the position, it is strongly encouraged that **you invest in dedicated**, **service-oriented** work individually (armanriazi.github.io/services).

EDUCATION AND TRAINING

Master's in Information Technology
Design And Production Software
Azad University (IAUN)

- Thesis "Using ACO Algorithm to Improve Performance for Container-Based Scientific Workflows."
- Spanned 4 years.
- Associate and Bachelor major in Computer Software Engineering (2009 - 2013).

October 2021

Certificate
Regenerative Finance
Frankfurt Blockchain School, Germany

- Spanned a duration of 18 weeks.
- ReFi cohort-1 Member.
- Completed coursework in VCM, dMRV, NbS, Tokenomic, Offsetting carbon and remove GHG.
- Scholarship Recipient.

January 2024

Certificate
Decentralized Finance
University of Nicosia, Cyprus

- Spanned 8 weeks.
- Completed coursework in tokenization, algorithms of blockchain, mechanisms of DEX, and digital currency.

September 2023

CERTIFICATIONS

*Spent over **500 hours** of theory and practice of blockchain and programming (**armanriazi.github.io/achievements**).*

- **Become a Rust Professional 2024** (138 hours)
- **Mastering TypeScript 2024** (100 hours)
- **Mastering PostgreSQL Databases 2024** (13 hours)
- **Design Patterns-OOP-DDD 2024** (23 hours)
- **Polkadot Blockchain and Substrate framework 2023** (3 hours)
- **Solana Blockchain 2023** (7 hours)

RE:

Dear Hiring Manager,

I am applying for the position to express my interest because your mission and vision align with my values. As you'll see from my resume, what motivates me is working for organizations, like yours, that serve a higher purpose. I would love to bring my skills and experience to support your cause.

Upon reviewing your job ad, I believe that my skills in programming, and distributed or decentralized systems fit well for this position. My education, certificates, and GitHub page demonstrate my suitability for this position and my active involvement in your work domain. My time at 21Crickets as a personal brand/start-up allowed me to hone my abilities and take on more challenging opportunities, in addition tracking various activities such as learning, mentoring, research and skill development, attending training courses, and other relevant pursuits. For approximately three and a half years, I have focused on these concurrent endeavors.

I plan to take what I have learned and apply it to this position with the dedication to constantly improve and exceed expectations. I am highly passionate about your technology and based on my qualifications I can learn new technologies and stacks quickly. You can find more information and examples of my work on my website. I am interested in both onsite and remote work, and my current situation and future jobs will be focused on cutting-edge technologies. I make decisions based on a scientific approach and consider practical skills. There are elaborated further details to assert the verification. I am particularly interested in onsite work for the company and also remote work.

You may notice a gap in my employment while reviewing my resume. From 22/06/2013 to 3/21/2015, during this period, I had to go to compulsory military service. The time that I was able to commit to my education has been invaluable to my professional growth as far as I have passed the three times entrance examinations to the universities so far. From 2020 to 2024 some major reasons changed my condition:

- Covid-19 from 2020 to 2021;
- Defending the master's thesis and making corrections of referees.
- In the zenith of unemployment and working under inappropriate economic conditions;
- The advent of new languages and stacks, and mature technologies like blockchain that needed a period of self-learning again;
- Managed a cryptocurrency portfolio as a technical and fundamental analyst in decentralized finance for almost two years and I withdrew it in 2021 (At least, I learned how to manage stress while keeping stamina; Having R&D and real use-case in DeFi).

I had to keep self-studying because of my love for the major. At the time, I thought I would be keeping self-study learning to update my prior experiences.
I have been working at Partdp.ai, which is a good company for professionals. I have pursued the manager of the company to adjust a contract per month because of my deterministic plan to immigrate. I must notify them one month before my left work.
I am eager to re-enter the professional sphere and apply my newfound qualifications and knowledge to the job.
Please take a look at my enclosed resume for more details about my work experience and qualifications. I fit this post perfectly. If you have any questions, evidence, or want to discuss this role further, please keep in touch with me via the mentioned email. I'd really like to speak with you more about the position, and I look forward to hearing from you soon.

Thank you for your time and consideration.

I don't believe in contributing to various open-source projects because nobody diligent to work without compensation, just like you and me. So, I'd prefer to pin sample or pilot projects on the GitHub that written fully by me.

PUBLICATIONS

- Using ACO Algorithm to Improve Performance for Container-based Scientific.
- Towards Blanket Licensing Digitized Music NFT Decentralized.
- Understanding the Landscape of Regenerating Finance and Digital Transformation.
- Digital Transformation in Smart Cities: Decentralized Architecture for Sustainable Development within the Web 3.0 Ecosystem.
- Supplement to Rust Programming: Advanced Concepts and Techniques (Multimedia in addition wrote a book as an author to native language).
- Ultimate Rust Systems Programming Architecting (Book technical editor to English).

DOCUMENTATION

- API-Gateway is hub of requests and responses that written no-vendor lock in. One part is APIs of clients or front-end application to connect the gateway and the other part is services of AI in which they communicate with each other (deployed on the GitHub).
- Supplement to Rust Programming: Advanced Concepts and Techniques is an online book the deployed on the GitHub privately.
- TypeScript Programming Essentials: A Supplementary Guide is an online book that deployed on the GitHub.
- Instructions and commands of infrastructure such as Docker, Ubuntu, CLIs, etc., which are private documents.

Sincerely,
Arman Riazi
