Dear Hiring Manager,

I am applying for the position to express my interest because your mission and vision align with my values. As you'll see from my resume, what motivates me is working for organizations, like yours, that serve a higher purpose.
Upon reviewing your job ad, I believe that my education, certificates, and GitHub page demonstrate my suitability for this position. You might think that I've included too many skills in my skills section. Feel free to consider those that aren't directly related to your requirements **as 'nice to have'** Everything listed is also available on my website, including code, videos, documentation, or certifications.
You may notice a **gap** in my employment while reviewing my resume. From 22/06/2013 to 3/21/2015, during this period, I had to go to compulsory military service. The time that I was able to commit to my education has been invaluable to my professional growth as far as I have passed the three times entrance examinations to universities so far. From 2019 to 2024 some major reasons changed my condition:

- Covid-19 from 2020 to 2021.
- Defending the master's thesis and making corrections of referees.
- In the zenith of unemployment and managing a team under inappropriate economic conditions.
- The advent of new languages and stacks, and technologies like blockchain that needed a period of self-learning again.
- Managed a cryptocurrency portfolio as a technical and fundamental analyst in decentralized finance. I withdrew, although I learned how to manage stress while keeping stamina; having R&D and real-life use-cases in the realm of DeFi. I had to keep self-studying because of my love for the software engineer. At the time, I thought I would be keeping self-study learning to update my prior experiences.

I am eager to re-enter the professional sphere and apply my newfound qualifications and knowledge to the job.
Please take a look at my enclosed resume for more details about my work experience and qualifications. I fit this post perfectly.
If you have any questions, evidence, or want to discuss this role further, please keep in touch with me via the mentioned email.
I'd really like to speak with you more about the position, and I look forward to hearing from you soon.

Technical Documentations

- API-Gateway v0.1.1 is a hub system of handling requests and responses that written no vendor lock-in. One part is APIs of clients or front-end application to connect the gateway and the other part is services of AI in which they communicate with each other (deployed on the GitHub).
- Supplement to Rust Programming: Advanced concepts and techniques is an online book the deployed on the GitHub privately.
- TypeScript Programming Essentials: A supplementary guide is an online book that deployed on the GitHub.
- Instructions and commands of infrastructure such as Docker, Ubuntu, CLIs, DB, Programming main code, Repeated errors, etc., which are private documents; Although, you can find them on documentation of products or using Chatgpt but it is not enough based on my experiance.

Activities

- Excess of what had been carried out in the companies privately, some projects are shown as open source or self-developed on GitHub that are part of noticeable and accessible projects.
- Experiences prior to 2015 have been eliminated, thus resulting in the most up-to-date records spanning a period of ten years.
- Please be aware if the mentioned elements are deemed unsuitable for the position, it is strongly encouraged that you invest in dedicated, service-oriented work individually (armanriazi.github.io/services).

Next Plan

- Preparing to immigrate.
- Learning a destination language (level of A2).

Member of European Carbon Offset Tokenization Association (ECOTA)

As a part of a rapidly expanding community of experts in the field of DLT and carbon markets.

Thank you for your time and consideration.

Sincerely, *Arman Riazi*
