ARMAN RIAZI

SUMMARY

Experienced Software and Web Application Developer with 12 years of experience in creating innovative products, specializing in strategy development for blockchain, cyber security, and web deployment. Proven track record in creating innovative software solutions for enterprises, including ERP, CRM, CMS, E-Commerce platforms, CyberSecurity, and Web 3.0. Adept at collaborating in both office and remote work environments. Committed to delivering customer-centric solutions that address business needs effectively.

Bold Profile

EXPERIENCES

Researcher
Self-Employeed | *September 2024 – Current*
• Developed cross-platform applications using Rust Crux framework for app store deployment.
• Conducted research on penetration testing methodologies and OWASP guidelines to enhance system security using Rust and blockchain technologies.

Directed a team
Co-Founder & Developer
21Crickets *Contractor | August 2019 - August 2024*

• Directed a team made up of 7 developers, including those specializing in frontend and backend development, within a larger team of 12 people.
• Developed microservices by using Express.js, ORMs, Message-broker, Nest.js, TypeScript, Node.js and PostgreSQL.
• Created RESTful API and services to communicate with front-end applications and AI services by using Auto-Deployment on the Isahab.ir.
• Optimized almost 7,000 lines of code through refactoring, resulting in a 30% boost in system performance for Partdp.ai.
• Researched and implemented new technologies to improve backend code functionality in addition team working by using internal platforms, SSO, GitLab,etc.
• Recommended strategies to implement a pilot project called the MFS NFT music platform based on Unique Network.
• Delved to implement a pilot project called the Mobarakeh Steel Blockchain based on the Substrate framework.
• Assisted cryptocurrency platforms with over ten million users.
• Researched emerging technologies related to blockchain development.
• Wrote articles in the fields of blockchain, cloud computing, and ReFi.
• Developed and maintained back-end applications using Express.js, Node.js, IBM Cloud, CouchDB, Restful API, and PostgreSQL.
• Documented the online books of Typescript-all-in-one and Rust-all-in-one.
• Implemented Substrate smart contracts and pallets as a sample project.
• Conducted three years of extensive Web 3.0, exploring innovative solutions, and staying ahead of emerging trends.
• Performed structured design reviews, programmed systems, wrote unit tests, and reviewed system test results.
• Achieve a 5% cost reduction in system management by adding features such as fault-tolerance and high-availability. Made a DevOps solution for developers based on CI Azure for Tikro.com.
• Made a platform, B2B market increased by 9% customer acquisition. Conducted developing a sample of microservices using Molecular framework. Created a custom dotNetCore ecommerce and modified existing themes to meet the customer's needs for Yalda Industry Zarifmosavar.com.
• Collaborated with SOS to enhance code functionality of an CRM.
• Designed websites, portals and large-scale web applications for multiple clients.
• Integrated payment and SMS third-party APIs into web applications for enhanced functionality.

SKILLS

- Rust
- TypeScript
- Node.js
- ES6
- Nest.js
- Express.js
- Web Security
- Kotlin
- cSharp
- Angular
- Postgresql
- CouchDB
- Git
- Research and Development
- API Development
- Monorepo
- GraphQL
- Substrate
- Polkadot
- Solana
- Smart Contract
- NFT
- DeFi
- ReFi
- CloudSIM
- Docker
- RabbitMQ
- Virtualization
- Microsoft Azure
- OpenTelemetry
- Ubuntu
- Windows Server
- Problem-Solving
- Results-Oriented

Senior Full Stack Developer
Nikafarinegan | *April 2018 - July 2019*

• Achieve a 20% cost reduction in system management by adding features such as fault-tolerance and high-availability.
• Created a platform for applicants for an enterprise-wide organization in the field of electric trade with over 10k employees.
• Managed multiple web projects simultaneously, using dotNetCore, Razor, GraphQL, SSR, IIS, MVC, DDD and Angular.
• Deployed web applications from local development environments to production servers using technologies like Kubernetes, Rancher, and Docker.
• Created RESTful APIs to enable communication between the frontend and backend of applications.
• Assisted other developers with coding, troubleshooting and debugging.

Web Developer
Freelancer | *November 2017 - March 2018*

• Integrated third-party Raja Rail Transport company APIs into a web application for enhanced functionality.
• Implemented code refactoring techniques leading to a 20% enhancement in system performance. Developed web applications using Angular, and MVC web application for Foroud Travel.
• Developed, web applications using HTML5, CSS3 and JavaScript, JQuery, Entity Framework, Kendo UI, and Crystal Report.

Software Engineer
Daewoo International Industry | *December 2015 - February 2017*

• Maintained a Sales software to reduce provision processing time by 13%.
• Provided sustainability of the line of producing products by 100% during peak promotion days or requests of credit shopping while ensuring the continuation and enhancement of services.
• Analyzed solutions, fix software code and Store-procedures bugs.
• Participated in agile development of products within cross-functional frameworks.

PROJECTS

• Repositories of a scratch Blockchain and Awesome-Rust
• JS-Family (Unique NFT, NodeJS, TypeScript, ExpressJS, and NestJS)
• Microservice project of an e-commerce web application(NestJS)
• ACO Workflow Function Container Framework based on CloudSIM (Java)
• Applicant Portal (NetCore, GraphQL, RestApi, and Angular)
• API-Gateway V0.1.1(Express.js, Sequelize, OpenTelemetry)

PUBLICATIONS

• Using ACO Algorithm to Improve Performance for Container-based Scientific
• Towards Blanket Licensing Digitized Music NFT Decentralized
• Understanding the Landscape of Regenerating Finance and Digital Transformation
• Decentralized Architecture for Sustainable Development within the Web 3.0
• Supplement to Rust Programming: Advanced Concepts and Techniques(Multimedia)
• Ultimate Rust Systems Programming Architecting(Co-Author, English)
• Rust as a Modern Mother Language: Advanced Techniques for Developing Robust Applications(Author, Native language)

EDUCATION

- Master's degree of Information Technology
- Bachelor's in computer software engineering
- Regenerative Finance Frankfurt Blockchain School
- Decentralized Finance from University of Nicosia

CERTIFICATIONS

- Become a Rust Professional
- Mastering TypeScript 2024
- Mastering PostgreSQL Databases
- Design Patterns-OOP-DDD
- Polkadot Blockchain and Substrate framework
- Solana Blockchain
- Spent over 500 hours of theory and practice of blockchain, Security, and programming in the section of achievements of website

Dear Hiring Manager,

I am applying for the position to express my interest because your mission and vision align with my values. As you'll see from my resume, what motivates me is working for organizations, like yours, that serve a higher purpose.
Upon reviewing your job ad, I believe that my education, certificates, and GitHub page demonstrate my suitability for this position. You might think that I've included too many skills in my skills section. Feel free to consider those that aren't directly related to your requirements **as 'nice to have'** Everything listed is also available on my website, including code, videos, documentation, or certifications.
You may notice a **gap** in my employment while reviewing my resume. From 22/06/2013 to 3/21/2015, during this period, I had to go to compulsory military service. The time that I was able to commit to my education has been invaluable to my professional growth as far as I have passed the three times entrance examinations to universities so far. From 2019 to 2024 some major reasons changed my condition:

- Covid-19 from 2020 to 2021.
- Defending the master's thesis and making corrections of referees.
- In the zenith of unemployment and managing a team under inappropriate economic conditions.
- The advent of new languages and stacks, and technologies like blockchain that needed a period of self-learning again.
- Managed a cryptocurrency portfolio as a technical and fundamental analyst in decentralized finance. I withdrew, although I learned how to manage stress while keeping stamina; having R&D and real-life use-cases in the realm of DeFi. I had to keep self-studying because of my love for the software engineer. At the time, I thought I would be keeping self-study learning to update my prior experiences.

I am eager to re-enter the professional sphere and apply my newfound qualifications and knowledge to the job.
Please take a look at my enclosed resume for more details about my work experience and qualifications. I fit this post perfectly.
If you have any questions, evidence, or want to discuss this role further, please keep in touch with me via the mentioned email.
I'd really like to speak with you more about the position, and I look forward to hearing from you soon.

Technical Documentations

- API-Gateway v0.1.1 is a hub system of handling requests and responses that written no vendor lock-in. One part is APIs of clients or front-end application to connect the gateway and the other part is services of AI in which they communicate with each other (deployed on the GitHub).
- Supplement to Rust Programming: Advanced concepts and techniques is an online book the deployed on the GitHub privately.
- TypeScript Programming Essentials: A supplementary guide is an online book that deployed on the GitHub.
- Instructions and commands of infrastructure such as Docker, Ubuntu, CLIs, DB, Programming main code, Repeated errors, etc., which are private documents; Although, you can find them on documentation of products or using Chatgpt but it is not enough based on my experiance.

Activities

- Excess of what had been carried out in the companies privately, some projects are shown as open source or self-developed on GitHub that are part of noticeable and accessible projects.
- Experiences prior to 2015 have been eliminated, thus resulting in the most up-to-date records spanning a period of ten years.
- Please be aware if the mentioned elements are deemed unsuitable for the position, it is strongly encouraged that you invest in dedicated, service-oriented work individually (armanriazi.github.io/services).

Next Plan

- Preparing to immigrate.
- Learning a destination language (level of A2).

Member of European Carbon Offset Tokenization Association (ECOTA)

As a part of a rapidly expanding community of experts in the field of DLT and carbon markets.

Thank you for your time and consideration.

Sincerely, *Arman Riazi*
